The sequence tag present in the CDNA between the Not! site and the oligo-dT track served to identify it as a clone from the normalized adult Spleen library. CDNA Library Preparation: M. Fatima Bonaldo, Ph.D. Clone distribution: clones will be available through Research Genetics This clone is also available through the I. M. A.G.E.
CONSORTIUM at LIME (info@image.llnl.gov). IMAGE ID=1787109 The following repetitive elements were found in this cDNA sequence: 33-145, >PBLD7#SINE_Alu

/dote="vector: pT713D-Pac (Pharmacia) with a modified
polylinker; Site_1: Not I; Site_2: ECO RI; THe UI-R-C2p
library is a subtracted library derived from the UI-R-C0 library.
UI-R-C0 library are UI-R-C0 library consisted of a
mixture of individually tagged normalized libraries
constructed from rat placenta, adult lung, brain, liver,
kidney, heart, spleen, ovary, muscle, 8, 12 and 18-day
embryo. The tag is a string of 3-5 nucleotides present
between the Not I site and the oligo-dT track which allows
identification of the library of origin of a clone within
the mixture. The subtracted library (UI-R-C2p) was
constructed as follows: PCR amplified coNa inserts from
UI-R-C1 clones from which 3: ESTS had been derived was
used as a driver in a hybridization with the UI-R-C1
library in the form of single-stranded circles. The
remaining single-stranded circles (subtracted library) was
purified by hydroxyapatite column chromatography,
converted to double-stranded circles and electroporated
into DH10B bacteria (Life Technologies) to generate the
UI-R-C2P library. This procedure has been previously
described (Bonaldo, Lennon and Soares, Genome Research 6:
791-805, 1996, 1996)."

The sequence contained an oligo-dT track that was present in the oligouclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the CDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized atrium at 15 doc library cDNA library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 34-146, >PBIDD#SINE/Alu Seq primer: M13 Forward

/note="Vector: pT713D-pac (Pharmacia) with a modified
polylinker; lst strand cDNA was prepared from mammary
gland tissue from a lactating female, and was then primed
with a Not I - oligo(dT) primer. Double-stranded cDNA was
ligated to Eco RI adaptors (Pharmacia), digested with Not
I and cloned into the Not I and Eco RI sites of the
modified pT713 vector. Library is normalized. Library
was constructed by Bento Soares and M. Fatima Bonaldo."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  em_gss8:*

NbHPU, and fetal heart NbHH19W) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-348479."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                           Sequence 26,

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT reducts to treat or detect. e.g. hypertension, stroke, software tailure, cancer, diabetes or asthma or set oporosis, heart failure, cancer, diabetes or asthma or sequence gene (Hozago, which was isolated from the human parathyroid. This nucleic acid sequence encodes the hypertension related calcium regulated gene (Hozago, which was isolated from the human parathyroid. Its expression is regulated by extracellular calcium concentration. The sequence displays 75 percent homology to the rat form, with concerved areas such as the EF-hand like mocifs and the initiating concerved areas such as the EF-hand like mocifs and the initiating concerved areas such as the protein, can be used to detect or modulate (e.g. enhance or inhibit) abnormal calcium levels: They can specifically be used to detect or treat, e.g. hypertension, hyperthyroidism, osteoporosis, heart failure, diabetes, stroke, cancer, inflammatory disease, and asthma heart failure, diabetes, cancer, inflammatory disease, and asthma heart failure, diabetes, cancer, sequence 701 BP; 137 A; 204 C; 217 G; 139 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a viral infection gene. The present invention describes nucleic acid sequences isolated from rat. The sequences of the invention comprise 70 viral infection (VI) genes and by tumour suppressor (TS) genes. Propagating cell cultures in the absence of the serum protein (SP) allows selective elimination of cells persistently infected with a virus from the cell culture. Inhibitors of the SP can be used for reducing or inhibiting a viral infection. Inhibitors of the TS gene products can be used to suppress a malignant phenotype (MP). The methods and inhibitors can be used with viruses such as similan immunodeficiency virus, avian immunodeficiency virus, bovine

                                                                                                                                                                Isolated human chromosome 4 fragment - used for therapy and diagnosis of cell proliferative disorders, e.g. cancer, AIDS, moles, warts and psoriasis.

Claim 4, Page 31a; 40p; English.

3 Human chromosome-4 fragments (T32033-35) comprise genetic determinants that are capable of inhibiting or arresting the proliferative capacity of a cell. They were identified using a microcell-mediated chromosome transfer protocol. The fragments are located at 4426-28 or 4433-34.1. They can be used in gene therapy of cancer and diseases, such as AIDS, that involve proliferative cells. They can also be used to diagnose the extent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15-APR-1996; US-015334.

Example 2; Page 73-75; 127pp; English.

This is a murine interleukin-5 (IL-5) cDNA genomic fusion gene. This can this is a murine interleukin-5 (IL-5) cDNA genomic construct contain a chimeric pIL-5.ExpDNA sequence, comprising control sequence (TCS) and a segment encoding interleukin-5 (IL-5), which control sequence (TCS) and a segment encoding interleukin-5 (IL-5), which control sequence (TCS) and a segment encoding interleukin-5 (IL-5), which control sequence (TCS) are a segment encoding interleukin-5 (IL-5), which control is specific. The TCS is usually from a murine CD3delta gene. The chimeric Specific. The TCS is usually from a murine CD3delta gene. The chimeric CD NA sequence is integrated into the genome and causes IL-5 to be control integrated into the genome and causes IL-5 to be control least as models of IL-5 associated disease, e.g. asthma, eosinophilic used as models of IL-5 associated disease, e.g. asthma osinophilic pneumonia, myalgia, Loffler's syndrome, allergy, emphysema, pulmonary (Ibrosols, Wagener's granulomeatosis, adult respiratory distress syndrome (ARDS), bacterial or fungal infection, leukaemia, rheumatoid arthritis, atopic dermatitis or contact hypersensitivity, or to screen for IL-5 associated allergy managed and antiquial therapeutic agents for an IL-5 associated discontant and antiquial processing appendix agents for an IL-5 associated allergy managed and antiquial processing appendix agents for an IL-5 associated allergy managed and antiquial processing and appendix appendix and antiquial processing and appendix and antiquial processing and appendix appendix and antiquial processing and appendix and antiquial processing and appendix appendix and antiquial processing and appendix and antiquial antiquial processing and appendix and antiquial processing and appendix and antiquial antiquial processing and appendix and antiquial antiquial processing and appendix and appendix and antiquial antiquial antiquial antiquial appendix appendix and append
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antagonists which are potential therapeutic agents for an IL-5 associated disease. These mice constitutively express IL-5 at high levels in
                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        22-APR-1998 (first entry)

Useful to detect and treat vitamin D related disorders
Example 4; Eage 77-79; 85pp; English.

This invention describes novel 25-hydroxyvitamin D 1-alpha-hydroxylase
(1-alpha-OHase), a renal cytochrome P450 enzyme of the vitamin D
pathway, and polynucleotides encoding the enzyme from human, mouse and
rat tissue. Molecules of the invention are used to diagnose and treat
Vitamin D-related disorders, to produce vitamin D metabolites, and to
identify modulators of the enzyme expression. The invention describes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mouse 1-alpha-OHase promoter region DNA #1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence encodes a protein (sequence not given in the specification) which is expressed in malignant human tumours and their metastases. The DNA sequence has the potential to be a valuable probe for the accurate assessment of the prognosis of patients with malignant tumours, by examination of a tiny biopsy vample, or even a few cells obtd. by fine needle aspiration, and thus to influence therapy. No homology to any known coding regions was found using EMBL and Genbank databases. Three possible exons were predicted, one in the forward strand in frame 2 (between bases 55 and 942) and two in the forward strand in frame 2 (between bases 55 and 942) and two in the reverse strand, in frames 1 (between bases 55 and 942) and two in the RT-PCR technique to amplify homologous mRNA sequences from RNA extracted from metastastic human tumour cell lines (see 075271 and 079572-4).

an animal cell transformed with the enzyme promoter which is used to identify compounds which modulate activity of the polynucleotide encoding the enzyme, and to modulate the production of vitamin D in patients with vitamin D endocrine disorders in the vitamin D hydroxylation pathway, the enzyme catalyses conversion of 25-hydroxyvitamin D to 1 alpha 25(GH)2D3.

immunoglobulin Fc portion (e.g. X20403) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 83 novel genes and their fragments (nucleic acid sequences: X20412-X20499; amino acid sequences Y00258-Y00377) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polypucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed in (see X20412 for described
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Behaouah A, Shaphro SD;

emphysema; cystic fibrosis; infection; animal model; promoter; ds.
Mus musculus strain 129/SvJ.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     transmembrane conductance regulator. They can also be used as models for disorders such as pulmonary emphysema and for the role of NE in combating infection. The promoter of the NE gene can be used for studying the regulation of the gene, or in studies where targetting of gene expression to neutrophils is desired. Human secreted protein constanting gene 10.

Human secreted protein treatment; prevention; protein therapy; AIDS; gene therapy; diagnosis; cancer; tumour; neurodegenerative disorder; developmental abnormality; fetal deficiency; blood disorder; leukemia; immune system disease; autoimmune disease; hepatic disease; lymphoma; renal disease; inflammation; allergy; Alzheimer's disease; schizophrenia; cognitive disorder; prostate disease; skeletal; cardiac; muscle disorder; pulmonary disorder; transplant rejection; osteoclast; osteoporosis; arthritis; malignancy; digestive; endocrine; infection; ss.
                                                                                                                                                                                                                  New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. neurological disorders, turnaurs, inflammation or haematological disorders, turnaurs, inflammation or haematological disorders, turnaurs, immune disorders, inflammation or haematological disorders, claim 1; Page 169; 215pp; English.

X51701-55 encode human secreted proteins. The polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Pathological conditions can also be diagnosed by determining the presence of mutations in the new polynucleotides. Specific uses are described for each polynucleotide, based on which tissues they are most highly expressed in, and include developing products for the inflammatory disorders, skin disorders, tumours, atherosclerosis, restenosis, autoimmune disorders, tumours, atherosclerosis, restenosis, autoimmune disorders, inducers, neurological disorders, arthritic disorders, skeletal disorders, neurological disorders, arthritic clisorders, skeletal disorders, neurological for identifying their rejection. The polypeptides are also useful for identifying their binding partners.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1030 gcctggctttcatagtgaggctcagtgtcgaattaaagaggtaaagcaactattaaaaaa 1089
